## Table of Contents

### Structure and Bioactivity of Low-Molecular Food Ingredients (Hedonic Value)

- Formation of Biogenic Amines and Odour Active Aldehydes from Amino Acids in Salami-type Sausage
- Fermented Maize Meal as a Biotechnological Product to Modify the Aroma of Bakery Products
- Influence of Human Saliva or Water on the Release of Wheat Bread Aroma Compounds
- Sunstruck-Flavour Formation in Hopped and Unhopped Beer
- Influence of the Manufacturing Process on the Formation of Key Aroma Compounds in Tomato Products
- Changes in the Odour Active Compounds of Dried *Boletus Edulis* During Rehydration
- 1-Alkene-1-Thiols - A Novel Class of Aroma Compounds Identified in Roasted White Sesame Seeds
- Characterisation of Volatile in Cold-Pressed Rape Seed Oil
- Characterisation of Important Aroma Compounds in Styrian Pumpkin Seed Oil
- Identification of the Key Aroma Compounds in Cognac
- Characterisation of Important Aroma Compounds in Red Wine Made from Dornfelder Grapes
- Comparison of Key Odorants in Rape and Chestnut Honey
- A Strategy for the Minimisation of a Characteristic New Car Odour
- Structure-Odour Relationship in Homologous Series of Primary, Secondary and Tertiary Mercaptoalcohols

### Development of Analytical Methods

- Quantitation of Glycidol Esters via Stable Isotope Dilution Assays
- Quantification of Glutathione in Erythrocytes
- Development of Stable Isotope Dilution Assays for Quantitation of Possible Precursors of 4-Vinylbenzene (Styrene) and Other Vinyl Constituents in Wheat Beer
- Development of a Stable Isotope Dilution Assay for the Quantification of Acrolein and its Application to Fats and Oils

## Correlation between the Chemical Structure and the Physical Properties of Biopolymers

- Technofunctional Properties of Vital Gluten as Affected by High Pressure Treatment in the Presence of Reducing Carbohydrates
- Properties of Wheat Dough and Bread as Affected by Laccases
- Studies on Sodium Binding in Wheat Bread Crumb after Mastication on a Model Mouth
- Deamidation of a Glutamine-Containing Tripeptide by Means of High Hydrostatic Pressure
- Identification of Cystine-Containing Peptides in Enzymatic Digests of Wheat Flour and Bread by Means of Mass Spectrometry/Electron Transfer Dissociation
- Isolation and Characterisation of Wheat-Specific  $\omega$ b-Gliadins
- Concentrations of SDS-Insoluble Proteins in Rye Dough as Affected by Transglutaminase
- Sulphur Content and Protein Composition of Wheat Flour as Affected by Fertilisation Using Fermentation Residues of Biogas Production
- Influence of the Protein Composition on Dough Properties and Bread Quality of Winter Wheat

## Physiological Effects of Food Ingredients

- Antiinflammatory Effect of an Aqueous Ginger Extract on Human T-Lymphocytes
- Impact of Differentially Steam Treated Raw Coffee on Gastric Acid Secretion
- Storage Stability of Linseed Oil as a Good  $\omega$ 3-Fatty Acid Source - Comparison of the Traditional Analytic Procedures for the Oxidation Sensitivity with a New Method for the Specific Detection of Fatty Acid Hydroperoxides
- Development of an Antioxidation Test for the Determination of the Oxidation Sensitivity of a Biomembrane - Selective Detection of Fatty Acid Hydroperoxides as Direct Oxidation Markers
- Identification of Odorant Receptors for Thiol Key Food Odorants

## Food Composition Tables

- Folic Acid Content of Different Foods
